Water Treatment Solutions for Large or Small CSSD

Complete water treatment systems for central sterile services from AmeriWater are designed to use a minimum of valuable floor space and provide high quality water for washing, rinsing and disinfecting. Field-proven in medical facilities across North America, AmeriWater's Central Sterile Services water treatment systems are designed to minimize maintenance and deliver greater energy efficiency while providing cleaner water for cleaning, disinfecting, and sterilization of medical equipment.

Complete RO/DI Health Care System

For Large CSSD with Multiple Systems:

This complete system takes up little floor space, yet includes everything you need to feed purified water to all of your washers, disinfectors and sterilizers in the CSS department. This system includes:

- Prefiltration for sediment removal
- On board anti-scalant to reduce hardness
- Reverse Osmosis to purify your water
- Deionizer to polish the RO water
- Storage tank with distribution pump to assure continuous pure water to your systems

Local installation and service available.

Silex Health Care Deionizer

For Single Systems:

The Silex system is a dual PVC column designed with a 200,000 ohm water quality monitor to indicate the system is producing purified water for a single washer/disinfecter or sterilizer with very little maintenance. When the indicator light changes from green to red (and alarm sounds), simply remove the lids and exchange the resin packs. Resin packs are not disposed of but regenerated by AmeriWater, which helps keep your CSS department green.

Custom configured as part of the complete Belimed system solution
